

Problem Set 06 Discussion

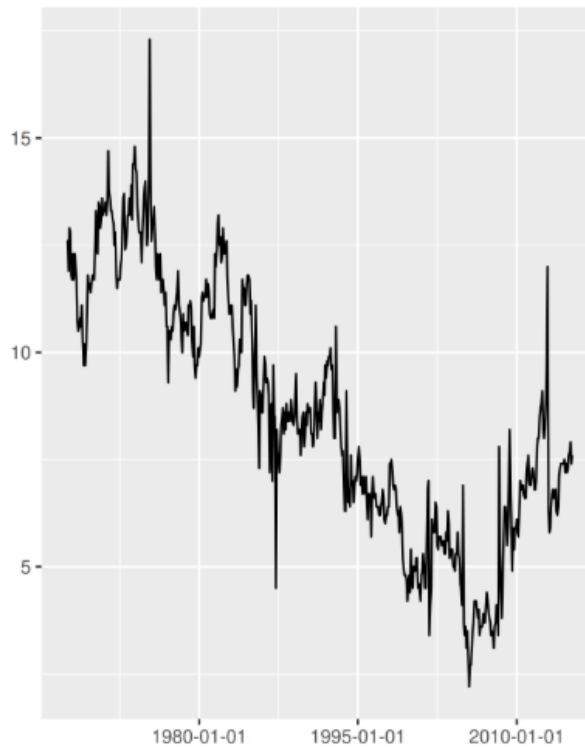

07 October 2025

Kayla Wilhoit

- Joins vs. merges – stay tuned for SQL later this semester!
- Filtering out the non-DC US territories helps the heatmap
- Manually setting x-axis scales for dates:

```
scale_x_discrete(breaks = c("2020-01-21", "2020-07-21", "2021-01-21", "2021-07-21", "2022-01-21"))
```

```
date_base + scale_x_date(date_breaks = "15 years")
```

```
base +  
  scale_x_continuous(  
    breaks = c(2000, 4000),  
    labels = c("2k", "4k")  
  )
```
