Kayla Wilhoit

- Ignoring case with the **grep -i** flag

```
grep "YAR009C" STE12_promoter_table.tsv | grep -iE "(T|A)(G|A)AAAC(A|G|T)"
```

```
cat STE12_promoter_table.tsv | grep -E '^YAR009C' | grep --color -Ei -o '[TA][GA]AAAC[AGT]' | wc -l
```

- Using **patsplit** in awk scripts
 - splits a string into an array by **matching the fields themselves** with a regular expression, rather than by defining a field separator

```
n = patsplit($2, motifs, /[TA][GA]AAAC[AGT]/)
```

```
seq = toupper($3)  
count = patsplit(seq, array, "(T|A)(G|A)AAAC(A|G|T)")
```
